Article History: | Received: 19.06.2023 | Accepted: 31.07.2023 | Published: 04.08.2023 |

**Abstract:** Today is the world of scientific and technological innovations in the field of medical science. Schizophrenia is a difficult ailment to treat. The author is suffering from schizophrenia for the last 30 years. Today since 2012 he is suffering from eye ailment and has glaucoma in his both eyes. The author lucidly and with cogent insight describes the agony and pain he experienced in the last 30 years. Today is the world of Fifth Industrial Revolution and application of United Nations Sustainable Development Goals. The vast world of the science of schizophrenia ailment needs to be re-envisioned and reframed as regards treatment and cure. Human sufferings and travails, trials and tribulations are immense for a mental patient suffering with this irrecoverable and monstrous ailment. Surely a new dawn in human civilization, man and mankind will emerge if doctors and medical health professionals takes active and positive steps in scientific research endeavor in the field of schizophrenia. The author deeply discusses these issues in this article. Science has advanced a lot since 1993 when the author was diagnosed with schizophrenia. The author deeply contemplates the need of psychology and psychiatry in the path towards a patient's illness, treatment and revival.

**Keywords:** Schizophrenia, disease, illness, years, vision, pain, agony struggle.

### 1.0 INTRODUCTION

Mankind, vision and science are today in the path of newer scientific regeneration as regards medical science and technology. Schizophrenia is a mental health illness which is difficult to treat. Scientific provenance, scientific divination and scientific ingenuity are the immediate needs of the hour. A mentally ill person has to go through immense difficulties in the path of his life. The author deeply describes and reiterates the immense needs of psychotherapy and medical help in the futuristic vision of science, technology and medicine. Human sufferings and human ardor are today immense as regards treatment and cure of this monstrous ailment. The author is suffering from this ailment since November, 1993. Since September, 2012, he is diagnosed with glaucoma in his both eyes. Since his first treatment of this illness, he has passed through immense neglect from his family and friends. This article is a message to the sufferers of this immensely difficult illness. Humanitarian side of the treatment of this ailment is today absent as regards treatment and cure. The author

in this article deeply pronounces the need of scientific innovations in the field of both psychiatry and psychotherapy. Man and mankind's vast vision will surely be enhanced if medical and health professionals comes forward with scientific innovation and scientific instinct in the field of schizophrenia or other bi-polar disorders.

Human society and human race are today in the midst of deep scientific and technological introspection. There are needs of immense scientific advancements in the fields of psychiatry and psychology. There are also needs of scientific divination and scientific revelation in the field of psychology science. The author deeply elucidates the deep agonies, trials and tribulations in his life. Negligence of family support are one of the scientific truth and scientific vision behind his illness. A newer remarkable era in the field of the science of psychiatry will surely emerge as science, vision and medical science will move forward.

## **2.0 The Agony, the Struggles in the Path of Life and Human Sufferings due to the Mental Health Issues due to Schizophrenia:**

The ardor, agony and human sufferings due to sufferings are vast and varied as regards treatment and cure of schizophrenia. In the year 1994 he post-graduated in Chemical Engineering from Jadavpur University, Kolkata, India. He is a Chemical Engineer by training and profession. He is a graduate and postgraduate in Chemical Engineering from Jadavpur University, Kolkata, India. In his final year of postgraduation he was having immense worries and uncertainties. He started hearing voices. He was suddenly beset with auditory hallucination. Today after 30 years he still has auditory hallucination, worries and uncertainties. Almighty and mankind has become so unkind to him. For 10 years from 1996 to 2006 he had no job and was in a devastating state of health. Human vision is truncated as regards his path of life. In spite of his illness he worked in a research project at Queen's University, Belfast, United Kingdom and taught Chemical Engineering in an engineering college in Oman. After COVID -19, the author fell into many other health issues. He was administered with the medicine Clozapine since 1996. Yet he is not free from his ailment. In the early years of his illness, he lost many jobs. Medical science research endeavor will one day surely open new doors of innovation and instinct as civilization and science treads forward [1-3].

Since 1993 there are vast changes in the science of psychiatry and psychology. Science, technology, engineering and medicines has also travelled crossing one frontier over another. A newer scientific regeneration and scientific rejuvenation are the absolute needs of the hour. The author deeply unravels the scientific and medical truth behind the science of schizophrenic illness as a patient of schizophrenia. A newer and regenerative scientific vision will surely unfold in the field of psychology and psychiatry will emerge if science and scientific vision moves in the right and positive direction [1-3].

## **3.0 Scientific Vision, Scientific Divination and Scientific Prowess in the Research Pursuit in Schizophrenia:**

Scientific vision, scientific forbearance and scientific fortitude in the scientific research pursuit in schizophrenia needs to be re-organized as science, technology and medicine trudges forward towards a newer epoch. The author deeply reiterates the vast and varied scientific vision in the research pursuit in schizophrenia. Since August 2020, he is administered with high dosage of Clozapine. Man and mankind as regards medical science are in a state of disaster. Human being and their illnesses are till today are irrecoverable as regards schizophrenia ailment. The author deeply pronounces the need of medical help and psychotherapy in the futuristic vision and futuristic

emancipation as regards research pursuit in the treatment of mental health illnesses [1-3].

Scientific divination and knowledge prowess and understanding are the immediate needs of the hour. Research pursuit in the field of psychology and psychiatry should be multi-disciplinary. Human race will surely move towards newer research and development boundaries if scientists, engineers, policy makers and civil society takes positive steps in the field of health sciences and technology [1, 2].

## **4.0 The March of Medical Science and the Science of Mental Disorder and the Needs of Psychiatry and Psychology to Human Life:**

The march of medical science and technology needs to be reenvisioned and revamped as regards treatment and cure of schizophrenia. Today the author is beset with immense worries and uncertainties. There are today vast and immediate needs of the innovation and advancements in the science of schizophrenia. Today after COVID-19, human civilization is in a state of disaster. The author experienced immense health related struggles since the outbreak of COVID-19 pandemic. He is diagnosed with a serious form of schizophrenia since August, 2020. Surely a new dawn in human civilization will emerge if psychiatrists and psychotherapists across the globe finds effective medical treatment in the futuristic vision of mental health science [1-3].

The frontiers of medical science and engineering are vast and varied. The author deeply elucidates the needs of psychotherapy in the futuristic emancipation of medical science and technology. Science, engineering and vision will surely usher in a newer era and a newer epoch in the field of psychology science [1-3].

## **5.0 The Deep Scientific Introspection and Scientific Contemplation in the Field of a Schizophrenic Patient's Deep and Unending Struggles:**

There is a need of a deep scientific introspection and scientific contemplation in the progress of author's illness since November, 1993. Since then he is beset with auditory hallucination, worries and uncertainties. Science and civilization has today no answers to this monstrous illnesses. Relatives, family and friends are so unkind to him. He is born and brought up with immense negligence. As he travelled by local train from one part of the metropolis of Kolkata to other part, he was beset with continuous auditory hallucination. A deep scientific comprehension is the absolute need of the hour. Deep scientific imagination, deep science provenance and ingenuity will surely go a long way in unfolding the intricacies of the medical science of schizophrenia.

Technology, engineering and vision of biomedical engineering are today ushering in newer areas of scientific truth and vision. The author deeply

pronounces the needs of intertwining of engineering science with medical sciences. Surely a new window of innovation and vision will emerge as human race and civilization moves forward [1-3].

#### **6.0 The Early Years of Medical Health Struggle and the Needs of Psychotherapy:**

The early years of the illness of the author was immensely devastating with the path of science and civilization. Today in the post COVID era, the author is beset with travails, trials and tribulations as regards mental health issues. Human sufferings and ardour are today immense with the progress of symptoms in a mental health patient. There are today immense needs of effective psychotherapy for the cure of schizophrenia. In this era of Fifth Industrial Revolution, there are immense needs of the scientific advances in the field of cure of mental health illnesses. This article deeply targets the immense needs of vision, ingenuity and divination in the path towards successful scientific research pursuit in medical science. There are today immense needs of scientific innovation in the field of science, technology, engineering and medicine. The early years of the author's illness are truly unbearable. There was immense anxiety and auditory hallucination as he treads through the path of life. This article is a message to all sufferers of the anxiety related illness [1, 2].

#### **7.0 Early Years of Author's Illness of Schizophrenia and the Immense Agony and Travails Behind it:**

Science, technology and engineering science are in today's era in the path of deep scientific and technological regeneration. Early years of author's illness was beset with immense physical agony and pain. There is no respite to ill-health within the author's body. Yet today he is involved in publishing and writing in well-known and reputed journals. The immense agony within the author is still there. Auditory hallucination and worries are engulfing the author immense today. This article is a deep message towards a newer visionary era in the field of schizophrenia treatment and cure. Man, and mankind today are in the intersection of innovation and development. This article deeply suggests the needs and necessities of the science of bi-polar disorders in the futuristic emancipation of global research and development initiatives in science and medicine [1-3].

#### **8.0 Futuristic Vision and Futuristic Knowledge and Understanding in the Scientific Endeavour in the Field of the Science of Schizophrenia:**

This is twenty-first century of science, technology and medicine. The world is moving towards Fifth Industrial Revolution and Fifth Internet Revolution. Schizophrenia and other bi-polar disorders need to be cured at the utmost and surely will bring happiness to the sufferers. Apart from Clozapine, there are practically no medicines to the cure of schizophrenia. After long years of illness, he has fallen hapless, dreadful, bewildered and helpless. This is an

era of medical science and physiology. The author stresses the needs of mental health treatment and treatment of bi-polar disorders. The futuristic vision of medical science needs to be reframed and reorganized with the march of man and mankind. Thus the need of futuristic vision and a remarkable era in the path of science and technology [1-3].

The futuristic knowledge and understanding in the field of psychology are crossing one frontier of scientific truth over another. Scientific provenance, scientific divination and deep scholarly effort will surely newer domains of resilience and mental health treatment [1-3].

#### **9.0 Future of Medical Science and Health Sciences and the Vast Vision for the Future:**

Medical science today stands in the middle of deep vision and scientific introspection. Similarly biological sciences are in the path of newer scientific prowess and scientific understanding. The vast vision for the future needs to be reframed and reorganized with the progress of science and civilization. Medical science and the science of psychology are in the vast roads of provenance and knowledge prowess. The author with immense agony highlights the needs of effective psychotherapy in the treatment and cure of schizophrenia. The dawn of human civilization will then usher in scientific truth and scientific imagination in the field of psychology in decades to come [1-3].

The futuristic vision of human civilization is moving through a dark phase as scientists and researchers grapples with COVID-19 pandemic. The scientific truth of schizophrenia needs to be re-envisioned with the passage of scientific history and time. The author deeply reiterates the need of psychotherapy counselling in the futuristic path of science and medicine. The struggle within the patient is immense and unimaginable. The author deeply opens a new chapter in the field of neurology and psychiatry science. Sometimes the agony within the author is truly unimaginable. The author in this article urges the scientific community to fight against different bi-polar disorders and difficult illnesses [1-3].

#### **10.0 CONCLUSION, FUTURISTIC OUTLOOK AND MEDICAL SCIENCE PERSPECTIVES:**

Medical and mental health science perspectives today stand in the middle of deep scientific ingenuity and introspection. The author is suffering from schizophrenia since November, 1993. In these 30 years he faced lot of neglect and negligence from his family and relatives. Till today schizophrenia has no cure and treatment in India or in the global scenario. The author reiterates and pronounces the need of scientific breakthrough and discovery in the treatment of mental health problems. Mental depression issues are very common in India today. With vision, capability, endurance and purpose the author trudges forward in the path of life. He comes from a Bengali middle-class

family in the state of West Bengal, India. Psychiatric treatment is expensive in India. Yet he has to struggle in life from the burden of schizophrenia ailment. This article will surely be the pallbearer towards affirmative vision and a newer remarkable era in the field of mental health treatment and cure. The author deeply pronounces the needs and necessities of scientific and technological breakthrough in the field of cure of schizophrenia. Scientific grit and determination will surely be the wonders of human civilization in future. Surely health sciences and technology will open new windows of innovation, instinct, purpose and capability in the futuristic vision of cure of schizophrenia.

Civilization and medical science are today standing in the middle of a deep crevice of scientific comprehension. Medical science has today no answers to the cure of schizophrenia. The author repeatedly reiterates the needs of effective treatment and psychotherapy counseling in the futuristic vision of the

science of psychiatry. A newer revolutionary era in the field of science and medicine will surely emerge and evolve if scientists, students and researchers in the field of psychology takes appropriate steps in discovering newer medicines and newer drug discovery. Surely a new epoch in the field of mental health illness will usher in which will help the hapless and vulnerable patients of schizophrenia.
